Transparent, Colorful, Two-in-One TPU+PC Customizable Phone Case

Item No.: PA179

This slim phone case is constructed from high-quality TPU and rigid PC composite material. It combines the soft, shock-absorbing property of TPU and the sturdy, scratch-resistant advantage of PC. The flexible TPU frame effectively buffers impact from accidental drops and collisions to protect the phone edge and screen. The hard PC back shell offers firm support and guards against daily scuffs, scratches and deformation. It delivers practical daily protection against dust and minor knocks while preserving a comfortable hand grip.

It adopts classic 2-in-1 assembled structure plus painting craft. The TPU inner frame and PC back cover are produced separately and then tightly combined together. After assembly, the surface goes through precise painting treatment to form a uniform, rich-colored coating. The painted finish delivers a smooth, attractive appearance with great color saturation. The coating has good adhesion, resisting slight peeling and fading under regular use. The layered 2-in-1 design also makes the case more flexible for customized colors and surface styles.

MOQ requirement: 100 pcs per model and 20 pcs per color. This order term allows you to pick assorted colors for one model. You can match hot-selling colors according to market preference, enrich your product lineup and balance your inventory investment. It works well for wholesalers and retailers who want to stock multiple colors for a single style.

Product Net Weight: 35.50g. Thanks to the streamlined 2-in-1 structure, the case keeps an ultra-lightweight profile. It will not add extra bulk to your smartphone, easy to carry in pockets or handbags. This 2-in-1 painted phone case features a lightweight body, reliable protection and fashionable painted look, which is a popular choice for mobile accessory sales.
